## MODULE INTEGRATION MODEL

This document demonstrates how the different modules of ERPbyW are integrated. From the diagram below, you will be able to appreciate where you will be able to access information regarding a project.

At the lower levels you are able to access information regarding the main purpose of the module in the project management perspective. For example, under Human Resources you have employees. If you want to learn about the performance of an employee, you can simply log into the Human Resources module and retrieve information about how an employee has delivered in the projects where they have been assigned.

Integrated Modules: Stakeholders, Human Resources (Employees), Inventory, Services, Collaboration, Workflow

Project

	Stakeholders	Human Resources	Inventory	Services	Collaboration	Workflow
1st Level Integration						

2nd Level Integration	Accounting	Performance Management		Calendar	Messaging	Document Management

Other examples is you can view all Invoices processed for a Stakeholder, and about how an employee has delivered in the projects where they have been assigned.
